

Chemical Literature Seminar

CHEMISTRY 4100 (1 hr)

Friday, 1:00-2:00

Room 103 CFS

Prof. Chasteen; CFS317e; 936) 294-1533. No assigned textbook.

Office hrs. 8-10 am: 12-1 pm MW; 11:00–noon TTh; E-mail **anytime**; chasteen@shsu.edu

Chemistry 410 is a seminar course in chemistry.

Course Objectives:

To develop specific skills needed by scientific professionals in the field of chemistry

To develop skills in expressing descriptions of scientific experimentation orally and in writing

1. Attendance is mandatory. The instructor may lower your final grade after 2 unexcused absences. Excused absences included sickness that involves a doctor or health clinic visit, death in the immediate family, and emergency situations like fires or automobile accidents. Documents for excused absences must be presented by the student to the instructor within one week of the student's return to class. Make sure you sign your name on the evaluation sheet (see below) each week. That's a clear record of your attendance.
2. Each student enrolled in this course is required to present a 15-20 minute seminar on a peer-reviewed research paper available in the scientific literature or their on-going scientific research. The subject may come from any field of chemistry (analytical, biochemical, environmental, forensic, inorganic, organic, or physical).
3. The paper will be selected from the current literature (journals) and submitted for approval to Dr. Chasteen at least 2 weeks prior to the presentation date; the earlier the better. Literature **review articles** are not acceptable. The stipulation that it must be a peer-reviewed journal is sometimes difficult to determine. Please contact your instructor well in advance if you have any questions about determining which journals are peer-reviewed. Presentation dates will be chosen on the first day of class. Students presenting at a scientific meeting that semester have priority for earlier presentation dates. Contact a faculty member in your field of interest if you need help selecting a paper. **Missing this (2-week precheck) deadline is the single most common grade lowering error of this course.** Please reread that sentence.
4. A written one paragraph summary of the topic (paper) being presented must be available in the Chemistry office **by 2:00** two days before the day when your presentation is made; so that's Wednesday before your Friday talk. You must print off and bring your abstract to the instructor. Your grade in the course will be one letter grade lower if you do not meet this deadline. If no abstract is available one day prior to your presentation day your course grade will be zero. The maximum length of the abstract's body text is limited to 200 words.

Your written abstract will be entitled with the literature paper's title and will list all of the authors, the journal **citation** (abbreviated journal name, volume, year, inclusive page numbers), and **your name**. Pay attention to the format for the citation below.

Copying the abstract of your journal paper for your summary is not allowed—this is plagiarism. This is very important. Copying the abstract will result in an F in the course. Period. You must learn to succinctly summarize the important points—that you will present—yourself. Reading lots of abstracts will help you to do this. Please ask a faculty member if you need help.

Note that the journal abbreviation is italicized; the year is bold, the authors' names separated by a semicolon, etc. No footnotes will be included in the abstract. Do not list the company or school affiliations, or degrees

(Ph.D. BS., etc) of the authors. **Make sure the citation ends with a period.** For instance: Smith, S.; Jones, T.; Docent, G., *J. Chem. Phys.* **2002**, *34*, 123-126. If the article you're using is an article in press the citation becomes: Smith, S.; Jones, T.; Docent, G., *J. Chem. Phys.* **2009**, in press.

If you bring the printed abstract by to me early I will help you edit it and then you can print of the result with no penalty in points. This will almost certainly increase your grade. Read that last sentence again. The format for scientific citation is important. The anatomy of the citation format we'll use in this class is detailed on the next page. Look carefully, especially when you're writing your abstract.

Anatomy of a citation

In the real citation, nothing is underlined above; my underlining is just used as a means of grouping parts of the citation for you.

5. All students in this course are required to pick up and read a copy of the summary of the talk that week **two days before the scheduled talk**. They will be on the table in front of Chemistry's secretary's office (CF317b).

6. Your verbal presentation of the paper that you have selected should include:

- A brief background of the subject
- A discussion of the procedures and results of the paper

Leave out superfluous details (experimental volumes used, temperatures, photographs of the instrument from the web. etc.) unless they're important. Inclusion of superfluous detail will lose grade points. Read that sentence again.

c. Conclusions and/or implications based on the results

d. Include graphic images as a visual aid to the presentation (See PowerPoint section below)

Make your images clear—small, poorly labeled graphics are bad. Make the images large enough to be read in the back of a room with 80 seats.

Don't include anything in a graphic that you don't want to explain—too much detail in a graphic can be confusing to your audience.

You may scan figures, tables, and images from your paper if necessary but complex tables should be reduced to include only what is useful to your talk. Digitally cutting images, table, reactions from your paper's PDF file is best.

Any images or information to display on your slides from other sources besides your paper must be referenced on the same slide. Include a URL if you get that item from the web.

Make sure your PowerPoint background doesn't interfere with your slides' text or images.

Use your graphic images as a means of triggering your verbal presentation. Try not to read directly from your slides nor from index cards if possible.

Be able to pronounce correctly all words on every slide—especially chemical terms.

Make sure you use correct chemical notation (subscripts, superscripts, etc.) in all slides and in your article abstract.

7. Your entire talk must be presented as a PowerPoint presentation. This requires that you prepare your talk's Microsoft PowerPoint file in advance and check out how it works on a Windows computer prior to the talk. You are responsible for how your presentation displays. CDs you burn yourself or files transported via a disc-on-key (flash drive, memory stick) or network access of your S Drive (if it's healthy) are all OK, but talk to Chasteen in advance about how you plan to access your PowerPoint file.

8. A period of 5 minutes will be allowed for questions from your audience after you finish as well as spontaneous questions from your audience **during** your talk. A request by a speaker for the audience to hold questions (until the speaker has finished) will probably not be heeded.

9. Presentations will be evaluated by all students and faculty in attendance (see attached sheet). You are required to pay close attention to the talk that someone else gives and fairly evaluate that talk based on the categories on the evaluation sheet. The members of the audience will be evaluated by the faculty as to their attentiveness and ability to **ask questions of the presenter**.

10. A bit about Digital Object Identifier (DOI; see www.doi.org). A DOI address in the case of scientific publications are used to allow access to digitally available documents with one address no matter where the publisher stores the file. Once a paper has been accepted for publications—following the peer review process—a DOI address is assigned and once that address is published—it's usually sent to the authors as soon as it becomes available—submitting that address to the DOI server (example: <http://dx.doi.org/10.1111/j.1574-6976.2009.00177.x>) will send you to at least the abstract of the document and often to a digital version of the entire document.

Example abstract:

Acidosis, lactate, electrolytes, muscle enzymes, and other factors
in the blood of *Sus scrofa* following repeated TASER[®] exposures

Jauchem, J.; Sherry, C.; Fines, D.; Cook, M., *Forensic Sci. Int.*, **2006**, 161, 20-30.

Presented by Krista Baldys

In recent years, the number of deaths associated with repeated exposure to the Thomas A Swift Electronic Rifle (TASER[®]) has shockingly increased. Several physiological responses, including shifted levels of lactate, hematocrit, potassium, and blood pH, are likely to occur. An experiment was conducted on 10 anaesthetized swine. From those 10, select groups went through different time increments of TASER[®] exposure to all four limbs. Using the Model GEM 3000 blood gas/electrolytes analyzer and other instrumentation, levels of whole blood factors were measured during the pre-exposure period, and several post- exposure periods. Results the scientist saw had a more direct relation of the physiological and biological changes due to muscle contraction rather than the direct electric charge. The decrease of respiration contributed to heighten levels of acidosis during the post-period (one hour after exposure). These effects were found to be short lived and not fatal to a healthy individual. However, these levels found in an unhealthy individual have led to restraint-associated cardiac arrest; ergo, some kind of medical monitoring should be required when individuals are restrained after repeated exposure to the TASER[®].

The Speaker's Name _____

Your Name _____

Give careful consideration to the following points about the seminar you have just heard and rate the points accordingly. You may take notes during the seminar that you want the presenter to read later. For the following, provide a rating using a scale of 1 to 5 with 5 being the highest rating. Space is left for comments which are encouraged. Add up your points for the final evaluation score.

1. The abstract, which you were required to read, was a clear summary of the material presented in this seminar. It mentioned the important points of the research and the results. _____

2. The speaker seemed to be familiar with the material and understood what the research being presented was about. _____

3. The speaker was able to distinguish the major ideas of the seminar from the supporting material: Superfluous minute details were not unnecessarily presented and important details were included. _____

4. The speaker spoke clearly and distinctly. _____

5. The speaker's presentation materials were clear and useful for the presentation; writing was large enough and graphs were easily read. _____

6. The speaker answered questions well. _____

7. What were the good points of the seminar? What could be corrected?

8. Your overall evaluation of the seminar. (Add all your points from above.) _____ (0—30)
