

CONTEMPORARY BIOLOGY
BIOLOGY 134 section 01 or 08
MWF 9:00 – 9:50 a.m. or MWF 1:00 – 1:50 a.m.
Lee Drain Building - Room 214 or 213
Spring 2008
Pre-requisites: none

Instructor: Tim Tripp
Office: 100A LDB
Phone: 294-4850

Office Hours: MWF 10-11 TT 8-9
or by appointment
Email: tnt012@shsu.edu

COURSE DESCRIPTION

Biology 134 is a course in general biology for the non-science major. The class is designed to expose non-scientists to the importance, applicability, and process of “doing” science, in this case the science of biology. Given that biology is defined as the study of life, and all of you should appreciate life (at least your own), I am unsympathetic to complaints about how this course is “irrelevant” to you. I hope to demonstrate its relevance by helping you understand general biological concepts encountered in everyday life. This knowledge should allow you to have a better understanding of the world around you, and to make more informed decisions in matters dealing with your health and with the environment. Lectures will deal with a wide variety of topics that examine “life” at all its levels, from biomolecules to cells to individuals to the biosphere.

Important note: credit in BIO 134 as a laboratory science is contingent upon completion of BIO 114. Credit in this course cannot be applied to either a major or a minor in the sciences.

COURSE OBJECTIVES

- √ Understand what science is, and what it is not
- √ Acquire a factual knowledge base of biological terms and concepts
- √ Learn fundamental principles and theories of biology
- √ Learn to apply your knowledge of science in general, and biology specifically, to critically evaluate information when solving problems and making decisions

REQUIRED MATERIALS:

TEXTBOOK: Campbell, N. A., J.B. Reece, & E.J. Simon. 2007. *Essential Biology with Physiology*. 2nd edition. Benjamin Cummings.

ISBN: 0536343551 (for the whole thing; i.e., text, supplements, access code for CourseCompass, etc.)

ISBN: 0805368414 (for just the book)

OPTIONAL (but extremely useful!) MATERIALS:

SUPPLEMENTS: *Current Issues in Biology*; reprints from Scientific American. Packaged with your textbook.

CD-ROM: Campbell, N. et al. *Essential Biology with Physiology*. (Included with the purchase of a new second edition of your textbook).

WEBSITE: WWW.ESSENTIALBIOLOGY.COM (Access code included with the purchase of a new second edition of your textbook).

METHODS OF INSTRUCTION:

Lectures will consist of material from the text *Essential Biology with Physiology* as well as from related materials, including but not limited to the *Scientific American* supplements packaged with your text. Figures and tables from the textbook and other sources will be presented during the lecture; some concepts will be emphasized through the use of various other media.

GRADING:

LECTURE EXAMS	BEST 3 OUT OF 4 @ 100 PTS. EACH	300 PTS.
LECTURE QUIZZES	BEST 10 OUT OF 12 @ 10 PTS. EACH	<u>100 PTS.</u>
	TOTAL	400 PTS.

Note: Three of these four exams will be given during regularly-scheduled class-times spaced throughout the semester; the 4th of these exams will be a non-comprehensive final exam, taken during finals week! I will allow you to drop the lowest of the 4 exam grades. Refer also to the **MAKE-UP POLICY** discussed below.

Note: A minimum of 12 in-class pop quizzes worth 10 points each will be administered during lectures throughout the semester; your overall quiz grade will be based on your 10 best scores from the 12 quizzes. Refer also **MAKE-UP POLICY** discussed below.

The letter grade you receive will be fixed by the percentage of points you accumulate for the entire class: A \geq 90%; B \geq 80%; C \geq 70%; D \geq 60%; F < 60%. These standards may be adjusted downwards based on class performance, but never upward. Notice that these are absolute, rather than relative ("curve") standards, and any student who gets 90% or above will receive an "A". You are not in competition with each other; rather, your challenge is to learn the material and to participate actively in the course.

Your exam and quiz grades will be posted on Blackboard as soon as they are graded. If you feel the posted grade is in error, you have two weeks after posting to challenge the grade. With so many students in a class, errors are made occasionally. Do not hesitate to challenge the grade or ask a question about it. To do so either send an e-mail, call me at my office, or come by the office. Do not wait until 2 days before the final to ask about a quiz grade in January.

Note: there will be **NO EXTRA CREDIT** available in this course; i.e., no additional points beyond those you earn on the quizzes and exams.

TENTATIVE EXAM DATES

Exam #1 (Feb. 13 th)	100 pts.
Exam #2 (Mar. 19 th)	100 pts.
Exam #3 (Apr. 16 th)	100 pts.
Final Exam (Week of May 12 th - see university final exam calendar)	100 pts.

Note: exam dates listed above are tentative, with the exception of the final. I will give you at least one week's notice if any of the exam dates need to be changed.

MAKE-UP POLICY

Students are required to take examinations at the instructor-scheduled times. Make-up exams will not be given; if you miss an exam, for whatever reason, that will be the exam grade you will drop. If you miss a pop quiz, that too will be one of the grades that you will drop. Remember that your grade for the course will be based on your best 3 out of 4 exams and on your best 10 out of 12 quizzes. If you miss more than one exam or two quizzes, the grade you earn will reflect your absences.

TENTATIVE LECTURE SCHEDULE

<u>WEEK OF:</u>		<u>CHAPTER:</u>
Jan. 14	Administrative details. Intro to science & biology	1
Jan. 21	Biological building blocks – the chemistry of bio	2
Jan. 28	Small stuff continued -- biomolecules	3
Feb. 04	Important organelles	4
Feb. 11	How cells work	5
Feb. 18	Photosynthesis	7
Feb. 25	Respiration	6
Mar. 03	Cellular reproduction DNA	8
Mar. 10	Spring break	
Mar. 17	Basic genetics	9
Mar. 24	DNA	10
Mar. 31	DNA Technology	12
Apr. 07	Microevolution	13
Apr. 14	Macroevolution	14
Apr. 21	Population ecology	18
Apr. 28	Community ecology	19
May 05	Biology and current issues	

The lecture schedule is subject to change, depending on how fast or how slow material is covered. I will always keep you posted of where we are in the schedule and where we are headed.

CLASS ATTENDANCE: Regular and punctual class attendance is expected of each student. To do well, you must be an equal and active participant in your education - therefore it is your responsibility to attend class. Most quiz and test material will be

based on class lectures and assigned readings. It should be no surprise, therefore, that to do well on quizzes and on exams you must attend lectures and read (and assimilate!) the assignments! Per University policy, attendance will be taken daily. Excessive absences (≥ 3) from class will influence your final grade for the course.

If you are unable to come to class due to illness or unexpected circumstances, it is your responsibility to obtain the class notes. You may contact me in my office if you have specific questions about a given lecture; however, I cannot repeat lectures for students who have missed them.

TIPS AND RULES

I. Studying Strategies

The key to doing well is to **KEEP UP WITH THE MATERIAL**. Read the assignments prior to coming to class. Take good notes during class (write down the main points, don't worry about prepositions, conjunctions, etc.), leaving a wide left-hand margin. Review your notes that same day, writing down (in a different color of pen or pencil) things you remember from lecture that did not make it into your notes (you will be surprised how much you **WILL** remember, but you **MUST** review your notes soon after class, not the next day or the next week). Reread the assigned material, adding yet another set (in a third color of pen or pencil) of points/examples/comments to the margin **NEXT** to similar points/concepts/examples that we discussed in class. Taking notes in this manner does two things. First, studies show that such repetition helps most of us take stuff from short-term memory and put it into long-term memory. Second, this technique will provide you with a very complete set of notes from class and from your reading that will be your **BEST** guide in helping you study for quizzes and exams.

Bring your textbook, a notebook, and a writing tool to all classes. Many of the figures in the texts will be used in lecture and you should feel free to make notes in the margins of your textbook. Additional handouts will be provided periodically, either as hardcopy or posted on BlackBoard. Do not lose or ignore them. If I take the time to make the handouts, they are important and you should study and understand their content.

II. Academic Honesty □ □

You may find that your performance in this class will benefit from discussions with your classmates and from working in small, motivated study groups. I encourage you to work with others to help clarify concepts and understand the class material. However, on exams and during quizzes, you must rely on your **own** reasoning, your **own** memory, and

your **own** answers. Cheating is a violation of the Honor Code and will not be tolerated. Regulations and responsibilities put forth in the *Student Code* and in the *Faculty Handbook* will be followed in the event of academic dishonesty.

III. Student Absences on Religious Holy Days □ □

Section 51.911(b) of the Texas Education Code requires that an institution of higher education excuse a student from attending classes or other required activities, including examinations, for the observance of a religious holy day, including travel for that purpose. A student desiring to absent himself/herself from a scheduled class in order to observe a religious holy day(s) must present to their instructor(s) a written statement concerning the religious holy day(s). This request must be made in the **first fifteen days of the semester** in which the absence(s) will occur. The instructor will complete a form notifying the student of a reasonable timeframe in which the missed assignments and/or examinations are to be completed.

IV. Disabled Student Policy □ □

SHSU adheres to all applicable federal, state, and local laws, regulations, and guidelines with respect to providing reasonable accommodations for students with disabilities. If you have a disability that may adversely affect your work in this class, you are encouraged to register with the SHSU Counseling Center and to talk with me about how I can best help you. All disclosures of disabilities will be kept strictly confidential. NOTE: no accommodation can be made until you register with the Counseling Center.

V. Classroom Rules of Conduct

Students will refrain from behavior in the classroom that intentionally or unintentionally disrupts the learning process and, thus, impedes the mission of the University. **All electronic equipment** including cellular telephones, pagers, MP3 players, and laptop computers must be turned off and put away before the start of class. **Reading of newspapers** or anything other than class-related materials is not allowed. **No talking** is allowed during the class except during appropriate contexts. Students engaging in inappropriate behavior may be asked to leave the class and may be reported to the Dean of Students for disciplinary action.

VI. Visitors in the Classroom

Visitors to class must have prior approval by the instructor to be present in the classroom. Visitors must adhere to the same rules of conduct as outlined above for students.

Additional hints for success in Contemporary Biology

1. Take personal responsibility to learn the material. Set a goal for yourself, both in terms of mastering the class material, and perhaps as well regarding the grade you want to earn. If you find that you are not achieving your goal, come by and talk with me --

together we might identify the best ways for you to succeed in this course. Do not wait until the Final Exam to start worrying about your grade!

2. If you are a full time student you should consider studying for your courses as your FULL TIME "job". When you add it all up, going to college is really more than a full time job! If you take this "job" seriously and plan the hours of your day wisely, you will succeed. Any additional employment and extracurricular activities should not detract from this time.

3. Study without distractions. It is difficult for most students to study in a noisy dorm or distracting library.

4. Read the textbook and other assignments before the material is covered in class and again afterward. For most of us, a single reading of difficult material is insufficient.

5. Take good notes during lectures. Let me encourage you again to look back over your notes soon after class – you will be surprised how many more details you will remember that you can add to your notes. If you do not understand a concept covered in class, deal with it *immediately*. Go back to the texts and assigned readings and review the topics. Learn to use your textbook and the Campbell web page as reference sources. Learn how to consult their indices to look up topics you need to review (or in which you are interested). There are also many other good texts in the library - use them to your advantage.

6. Keep on top of the material. Do not wait until 2 days before an exam to learn everything.

7. Participate in active studying. When you study, do not simply read your notes and the book. Active studying may involve outlining the material, drawing diagrams, discussing concepts with classmates, surfing the Campbell web page for additional insights, etc.

8. You should begin reviewing (NOT studying the material for the first time) at least a week prior to each exam. The best way to review for midterms and the final exam is to study your class notes which, if you follow my suggestions above, will provide you with a detailed summary of the important concepts and examples. The best way to study for the quizzes is to stay on top of the material!

10. Get adequate sleep the night before each exam. Most students will not reach their goal by pulling "all-nighters" before tests - there is simply too much material to cram!!

11. Take all of your work seriously! Learning should be enjoyable, but it is surprisingly hard work.
